- Cell culture has become one of the major tools used in the life sciences today.
- **What is Cell and Tissue Culture?**
- **Tissue Culture** is the general term for the removal of cells, tissues, or organs from an animal or plant and their subsequent placement into an artificial environment conducive to growth.
- This environment usually consists of a suitable glass or plastic culture vessel containing a liquid or semi- solid medium that supplies the nutrients essential for survival and growth.

## • Subculturing

- When the cells in the primary culture vessel have grown and filled up all of the available culture substrate, they must be **Subcultured** to give them room for continued growth. This is usually done by removing them as gently as possible from the substrate with enzymes.
- Trypsinization
- Scraping of the cells
- Once released, the cell suspension can then be subdivided and placed into new culture vessels.

**(ALUMNI Student)**

Department of BBA & BBA (CA) has arranged the Guest Lecture on  
“Cyber Awareness” by MrYogesh Chaudhari (Soft Developer) Amdocs Pvt Ltd, on 22/01/2020.  
All around 31 students were present. He tells about

- Current threats
- Attack red flags
- Defensive procedures
- Threat reaction plans

Security awareness training/ network security training should always be based on real-life attack simulations that are in line with the most recent criminal trends. Hackers are always evolving their approaches and technologies, and so your company must always be upgrading its defense training to keep vulnerabilities low.

This Lecture was really helpful BBA (CA) students for future IT industries.  
Student realized that, the different options in the career.
